

TECHSORB

A non-contact animal cage board for a more precise control of variables.

Common Uses: Techsorb has no odor controlling chemicals and can be used for all types of research programs including GLP and toxicology. It soaks up liquids like a sponge and offers many convenient advantages.

Super Absorbency- Techsorb is so absorbent that in fact, it is recommended for use under larger animals such as rabbits, guinea pigs, ferrets, dogs & non-human primates.

Special Wicking Action- Techsorb's effective capillary action is why moisture spreads evenly throughout the sheet- instead of puddling or running off.

Greater Economy- Techsorb cuts animal care costs because it lasts up to twice as long as other cage liners. Fewer replacements, means easier cage maintenance and lower labor costs.

Easier Handling- Sheets are thin but rigid enough for easy moving and handling.

Space Savings- Techsorb takes less space than other materials and allows more compact disposal.

Bright White Surface- Techsorb's textured white surface reflects light, brightening cages and making bodily fluids readily noticeable.

Custom Sizing- Like all of our other cage/pan liners, Techsorb can be custom-cut. Lead times on custom items may vary, please **contact us** for more details.
