

Poly Pad™

Poly Pads are versatile liners of multi-ply cellulose wadding. Poly Pads back up the multi-layer absorbency with a sturdy polyethylene back for zero leakage. They are more economical and effectively eliminate dust.

Multiple Uses

All-purpose Poly Pads are ideal for cage liners, necropsy liners and pads for animal post-surgical recovery areas. They are also widely used as bench liners and as lining material for radioactive or hazardous substances work areas.

Super Absorbency

Poly Pads are multi-layered allowing for increased absorbing action. Poly Pads can soak up heavy discharge from large animals such as rabbits and guinea pigs.

Special Wicking Action

No puddling or runoff with Poly Pads. The capillary action of their several layers spreads moisture throughout the sheet.

Dust Elimination

Made from 100% virgin fibers, the absorbent layers of Poly Pads will not create dust- which is a chronic problem.

More Economical

Because of the superior absorbency, the pads last a long time. Ultimately, translating into lower costs and fewer changes in either cage or bench maintenance.

Quick & Easy Observation

Poly Pads are made of white-colored tissue which makes animal discharges and lab spills noticeable.

Custom Sizing

Poly Pads are custom cut to fit your needs. They come in custom-cut sheets

****can be ordered in 4-18 plies****
